

Aura™

MANAGED PRINT MODEL CREATION

Aura was selected by this healthcare business to provide a managed print and document service, after an extensive market review and selection process.

Creation of an online
dashboard

Transition to a secure follow-
me print model

Huge reduction of
documents printed

A HEALTHIER DOCUMENT MANAGEMENT SYSTEM

Aura has helped the organisation to redefine their processes through workflow automation, resulting in a huge reduction of the number of documents printed.

Today, the client has a full secure printing solution that has allowed them to reduce waste, improve employee satisfaction, raise business productivity, reduce IT complexity and most of all, provide business and employee protection through full security.

Aura initially implemented a “service take over” whilst creating an online dashboard of current assets across the

business, in order to provide wider visibility to support the transformation process and design. This dashboard was then retained in steady-state to provide direct online data of all aspects of the estate and service levels real-time.

The organisation has gained huge tangible savings, unlocking free money from the budget and creating at least 30% hard savings. This has been possible through a reduction in the cost of assets, print volumes and employees’ time, as well as a reduction in general paper and ink waste across the business.

“Aura focused on driving costs down and improving business productivity.”
